                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the s. pneumoniae BVH-11 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antigen; prophylaxis; therapy; infection; diagnosis; meningitis; be otitis media; pneumonia; immunisation; bactericidal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
           The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, oticis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A
                                                                                                                                                   New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components f or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia -

A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcual infections. This is the amino acid sequence of Streptococcus pneumoniae protein BVH-11, used to create the antigenic peptides described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                        621

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein antigens may then be used as vaccines for the protein antigens may then be used as vaccines for prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcus pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prophylaxis; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11 or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A
                                                                                                                                                                                                                                                                            New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components or preventing streptococcal infections such as otitis medimeningitis, and bacteraemia
                                                                                                                                                                                                                             Example 1; Page -; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-JUN-2000; 2000US-212683P

A polymucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides. Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            556;

This sequence may encompass a smallerr, approximately 20 kDa protein (see AAY91938), also having human C3-degrading activity. The DNA sequences (AAA08556-57) can be used for producing an immune response to Streptococcus pneumoniae in a mammal. Antibodies against the proteins can be used to inhibit S. pneumoniae-mediated C3 degradation. C3-mediated inflammation and rejection in xenotransplantation can be inhibited by expressing the nucleic acid sequences on the surface of an organ of an animal. In particular, the polypeptides are useful for stimulating the immune system and are effective to immunize or treat a mammalian subject against Streptococcus pneumoniae infection or colonization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated polypeptide is used to stimulate immune system and immunize treat a mammalian subject against Streptococcus pneumoniae infection colonization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human C3-degrading protein; 92 kDa; immunostimulatory; vaccine; inhibitor; inflammation; organ rejection; xenotransplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY91939

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC ABS5454. Also included are an antibody which binds one of the CC proteins, treating a patient by administering first and second primers, antibody (in a composition), a kit comprising first and second primers. CC which are the nucleic acid cited above or fragments between nucleotides CC which are the nucleic acid cited above or fragments between nucleotides CC where the first primer is substantially complementary to the target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target CC sequence and the second primer is substantially complementary to the complementary substantial complementary to the target CC sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the test compound binds to the CC genes encoding the proteins has been rendered inactive. The proteins, complementary to treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, cepsies, diagnostics and antibiotics. The methods are useful for compound compositions are useful for compositions are discussed by the identified coding regions from the CC denomic sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
AAY81501 to AAY81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be useful for the detection and diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are alsuseful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the

New vaccine compositions are described which comprise Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HxxHxH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating preumococcal infections which includes otitis media, nasopharyngeal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, ottits media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11-2 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcal otitis media,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in the pathogenicity of Streptococcus pneumoniae, there still remains a need to identify polypeptides having epitopes in common from various strains of S. pneumoniae in order to utilise such polypeptides in vaccines to protect against a wide variety of S. pneumoniae. New vaccine compositions are described which comprise Streptococcus pneumoniae polypeptide (or fragments) of 80 - 680 amino acids in length that comprise at least one histidine triad residue (HXXHXH) or a coiled-coil region, or an antibody directed against these features. The vaccine is useful in protecting against insection by Streptococcus pneumoniae. The vaccine composition comprising antibodies to is useful for passive immunization for treating pneumococcal infections which includes otitis media, nasopharyngeal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Although

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ДЪ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
         The invention relates to a protein comprising or having at least 50% CC identity to any of the 2469 amino acid sequences, identified in the CC specification (available on a computer readable format), or its fragment, CC expressed from 2469 of 2489 identified DNA coding regions from the CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC ABS56454. Also included are an antibody which binds one of the CC proteins, treating a patient by administering the protein, DNA or CC which are the nucleic acid cited above or fragments between nucleotides CC which are the nucleic acid cited above or fragments between nucleotides CC which are the sequence not defined in the specification, for amplifying a CC target sequence contained within a Streptococcus nucleot acid sequence, CC where the first primer is substantially complementary to the target CC complement of the target squence, and where the parts of the primers CC sequence and the second primer is substantially complementary to the target CC sequence to be amplified, assay comprising contacting a test compound CC with the protein, and determining whether the termining to the target contained in and a Strantococcus and above the test compound brinds to the protein, and strantococcus and above the termining to the target contains and a Strantococcus and above the termining to the target contains and strantococcus and above the termining to the target contains and strantococcus and above the termining to the target contains and strantococcus and above the termining to the termining to the target contains and active the termining to the target contains and a strantococcus and above the termining to the target contains and active the termining to the target contains and active the termining to the target contains and active the termining to the target contains and the second brinds to the contains and the termining the termining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media or ear infection -

The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2469 proteins expressed by the identified coding regions from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the printed specification, format directly from WIPO at

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptcoccal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcal otitis media,

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae BVH-11-2M protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcal otitis media,
                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         413
```

The present invention describes nucleic acid antigens (II) from Streptococcus pneumoniae.

acids

The I

protein

encoding protein protein antigens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a spneumoniae BVH-11-2 protein antigen, from the present invention.

                                                                                                                                                                                                                                                                                                                              infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus progenes, group B Streptococcus such as Streptococcus progenes, group B Streptococcus such as Streptococcus galactiae, S. dysgalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A streptococcus polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-10, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment compnigitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  therapeutic or prophylactic treatment of any streptococcal bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BVH-3; BVH-11; vaccine; meningitis; otitis media; bacteraemia; pneumonia; streptococcal bacterial infection; mutant; mutein.
                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                       Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-JUN-2000; 2000US-212683P.

The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein they encode. The protein antigens may then be used as vaccines for t prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae BVH-11-2 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcal antigens useful for vaccinal otitis media, bacteremia and/or pneumonia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                 CC identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of CC identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of CC BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) CC comprising (I) is useful for therapeutic or prophylactic treatment of CC meningitis, otitis media, bacteraemia or pneumonia infection in an CC individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcus useful for CC infection (e.g., caused by Streptococcus pneumoniae, group A CC Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus pyogenes, S. uberis, S. nocardia or CC staphylococcus aureus) in an individual susceptible to the infection. CC A polymucleotide (III) encoding (I) is useful in DNA immunisation CC techniques. The Streptococcus polypetides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA CC probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be CC used for detecting circulating S. pneumonia nucleic acid in a sample for CC Streptococcus pneumoniae protein BVH-11-2, used to create the antigenic peptides described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents and sequence of the protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcal otitis media,

                The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a S. pneumoniae BVH-11-2 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antigen; prophylaxis; therapy; infection; diagnosis; meningitis; bootitis media; pneumonia; immunisation; bactericidal.

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, ottis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11-2 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcal antigens useful for vaccinating otitis media, bacteremia and/or pneumonia -

                                                                                  The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antiger prophylaxis; therapy; infection; diagnosis; meningitis; otitis media; pneumonia; immunisation; bactericidal.
                                                                                                                                                                                                                 Streptococcal antigens useful for vaccinating otitis media, bacteremia and/or pneumonia -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
